

FOR IMMEDIATE RELEASE

BERICAP presents latest plastic closures for various applications at FachPack 2019

Budenheim, Germany – September 28, 2019 – BERICAP, one of the leading plastic closure manufacturers, will present its product innovations at [FachPack](#) trade fair in Nuremberg from 24 to 26 September 2019. Among the highlights at the BERICAP stand 418 in hall 6 are weight-optimized closures for 45- and 60-millimeter threaded necks with an up to 30% weight decrease, whilst offering the same technical performance as its predecessor. Another new light weight development is the SK 42/21 SFB Safeseal, a closure which suits the car care products such as distilled water or wind screen cleaner, but it is also usable for AdBlue® containers. A set of new flexible and foldable pourers for easy and spill free pouring complements BERICAP's system offer for this application. The innovative BERICAP Ring Peel Liner provides superior consumer handling and at the same time supports additional product safety and protection against counterfeiters. This novelty is available for different neck diameters and can be used for closures usually using IHS liner systems today. Last but not least the new BERICAP Valve will be presented at FachPack - a TPE valve for ketchup and other paste-like products, which can easily be recycled in the PE recycling stream – an important argument in today's environmental and recycling discussion.

“For more than a decade, FachPack has been an important platform for us to present our latest innovations to a top-class, international trade audience. The global trade fair also gives us the opportunity to exchange information with trade visitors and business partners on the latest trends and requirements of the industry”, states Volker Spiesmacher, Director Sales & Marketing at BERICAP. “We will be present with a large team of product experts and management representatives and are looking forward to interesting discussions.”

Due to its global presence, BERICAP is able to recognize new requirements of companies from various industries at an early stage and thus develop products that meet these needs. In its four research and development centers, BERICAP also designs future-oriented solutions for the challenges of tomorrow. BERICAP has set itself the goal of offering its customers significant added value with efficient and effective innovations and thus making them more competitive. These could be, for example, weight-optimized product variants. With every new development, care is taken to ensure that the products are sustainable and as environmentally friendly as possible.

The constantly growing BERICAP branch network provides customers with optimal on-site support. The recent opening of a further production facility in Mexico shows that the global network is continuously being expanded.

About BERICAP

BERICAP is one of the leading global manufacturers of plastic closures, with 24 factories serving customers in over 100 countries across the world. With four central R&D centers and an own mold shop in Hungary, BERICAP is particularly committed to developing innovative plastic closures to support its customers' success.

The company puts a strong emphasis on quality. Best manufacturing practice in the BERICAP Group is centrally coordinated and implemented at each plant to ensure superior quality and will be continuously
